THE EFFECT OF CORPORATE IMAGE ON WOM: THE ROLE OF CUSTOMER SATISFACTION AND TRUST
PROPOSING A CONCEPTUAL FRAMEWORK

Abstract
The use of positive corporate image by companies continues to be a popular method to support the customer satisfaction and to encourage his/her trust on the company, and lead the customer to own more positive word of mouth about the company and its brand. When the customers have the positive corporate image they focus on aspects of a company, in addition, they usually express it by using the positive words of mouth, and which in turn is considered the goal of any company. The reason that lies behind using corporate image is its direct and indirect strong impact that builds customer satisfaction and makes customers more trust to speak positively about the company. This theoretical paper develops a conceptual framework that explains how independent variable (corporate image) affects on dependent variable which is called word of mouth when trust and customer satisfaction are mediating.

Keywords: Corporate Image, Trust, Customer Satisfaction and WOM

INTRODUCTION
Word-of-mouth communication simply involves people sharing their assessment of their experiences. Word-of-mouth communication, which relates both to positive and negative evaluations of service encounters, has been shown to influence other people's purchase behavior (NG, 2001). Lo Chung (2012) Mentioned that word of mouth deals with the process of transferring of information from one person to the other through oral communication. The concept of word of mouth has become an important term in the marketing activities conducted by various organizations. Interpersonal communication or the word of mouth has gained
importance in the decision making of the consumers. Word of mouth is gaining importance among the societal changes observed in the environment and has become one of the most important and effective communication channel.

A positive corporate image is not only increasing competition but also encourage consumers to repurchase (Tu et al, 2013). Corporate image helps consumers obtain a better understanding of the products offered by specific corporations and further mitigate their uncertainty while making buying decisions (Lin and lu, 2010), and they mentioned that corporate image plays important role to enhance the trust of customer. Tu et al, (2013) illustrated that corporate image form positive customer satisfaction, in addition, Sichtmann, (2007) and NG, (2001) explored that trust and customer satisfaction encourage the customer WOM.

Problem Statement
Although many studies have been conducted on this issue, but there are still gaps that need to be filled in the literature. Studies conducted by previous researchers only focused on certain aspects of customer's WOM process, and the variables used in those studies were segmented in natural in previous studies. In other words, the model proposed in this study is an integrative one, and come from four separate models found in the area related literature, e.g. study of (Tu et al, 2013) explored the relationship between corporate image and customer satisfaction, study of (Lin and lu, 2010) explored the relationship between corporate image and trust, study of (Sichtmann, 2007) explored the effect of trust on WOM, while study of (NG, 2001) illustrated the effect of customer satisfaction on WOM. This means, that four main models of this study were segmented in four different studies, and each one was separated alone, and this study tries to integrate them in one conceptual framework, and this is the contribution of this study.

LITERATURE REVIEW
One of the most essential topics in marketing management is the subject WOM. (Rust, 1996) mentioned that word-of-mouth recommendations from friends, family, and colleagues who are satisfied with a company have a measurable impact on sales. Struebing, (1996) mentioned that a new academic study shows that revenue streams can be generated from attracting new customers via word-of-mouth recommendations, increasing the percentage of retained customers, and increasing spending or usage by existing customers. In addition, corporate image plays an important role to form customer satisfaction and trust, therefore, customer satisfaction and trust lead to support WOM. This conceptual paper try to explore how independent variable which called is corporate image impacts on dependent variable which is
called WOM when customer satisfaction and trust are mediating, and these issues are discussed in details to allay concepts of these concerns here.

**Corporate Image**

Dowling (1986) defined image as specific viewpoints towards a certain matter through description, memory, or other ways of association with such matter. It results from the interactions among people’s impression, existing beliefs, thoughts, and feelings on such a thing. (Giovanis et al., 2014) mentioned that corporate image has been identified as an important factor in the overall judgment of a service provider. It is defined as the mental picture that springs up at the mention of a firm's name. It is a composite psychological impression that continuously changes with the firm’s circumstances, media coverage, performance, etc. Similar to a firm’s reputation or goodwill, it is the public perception of the firm, rather than a reflection of its actual state or position. MacInnis and Price (1987) pointed out that corporate image results from an evaluation process, which originates from thoughts, feelings, and previous consumption experience in relation to a business entity, turning consumers’ memories into spiritual impression (Yuille and Catchpole, 1977). Gray (1986) suggested that corporate image is the combination of consumers’ perception and attitude towards a business entity.

Robertson and Gatignon (1986) further proposed that corporate image helps facilitate consumers’ knowledge on products or services offered by a certain company and reduces uncertainty while making buying decisions. Consumers are directed to buy commodities from a company with good corporate image to reduce their risks. Nguyen and Leblanc (2001) found that corporate image is associated with a company’s constitution and nature of behavior. For example, corporate name, corporate building, and product or service quality may reinforce customer's’ impression on a company.

Corporate image is defined as the “overall impression” left in the customers’ mind as a result of accumulative feelings, ideas, attitudes and experiences with the organization, stored in memory, transformed into a positive/negative meaning, retrieved to reconstruct image and recalled when the name of the organization is heard or brought to ones’ mind (Dowling, 1986). Thus, corporate image is a result of communication process in which the organizations create and spread a specific message that constitutes their strategic intent; mission, vision, goals and identity that reflects their core values that they cherish (Leuthesser and Kohli, 1997).

Walters and Paul (1970) indicated that corporate image features four aspects: subjectivity, screening, elaboration, and changeability. Walters (1978) suggested that the subjective attitude, feelings, or impression on an enterprise or its activities held by consumers are connected with attitude.
Customer Satisfaction

The word "satisfaction" is significant by itself; as psychologists debate our overall "life" satisfaction so management seeks to provide job satisfaction and consumer satisfaction. Consumers demand satisfaction. Consumer behaviour researchers seek to understand and explain consumer satisfaction (Wan, 2007). According to (Oliver, 1997) satisfaction is defined from the mixture of both affection (emotion) and cognition approach as "the consumer's fulfillment response. (Almossawi, 2012) said that many previous studies has been extensively focused on customer's satisfaction e.g. (Oliver, 1980). (Kotler and Keller, 2008) define satisfaction as “a person’s feeling of pleasure or disappointment resulting from comparing a product’s perceived performance (or outcome) in relation to his/her expectations”. This definition is supported by many other studies, for example, (Oliver, 1980). Others define customer satisfaction as the feeling or attitude of customers toward a product/service after it has been used (Hansemam & Albinsson, 2004).

Parasuraman et al., (1988) Customer satisfaction has emerged as one of the most powerful tools for sustaining a competitive advantage for business success and survival nowadays. Joewono and Kubota (2007) indicated that customer satisfaction was from the product and service evaluations according to the customer experiences as well as the overall measurement on the consuming experience.

York et al., (2009) mentioned that customer satisfaction’s importance, specifically service encounters, is well documented in the marketing and management literature, it is recognized as an important goal largely because empirical studies establish a relationship between customer satisfaction, customer loyalty and long-term profitability. Specifically, during the past two decades, research centered around exploring customer satisfaction’s impact on customer retention and loyalty, branding, profits, market share and growth (Ammar et al., 2008). Therefore, it is not surprising that organizations spend substantial resources measuring and managing customer satisfaction (Hasin, 2001; Lee; 2005).

Aburoub et al., (2011) mentioned that customers’ satisfaction in the first place in interested in defining of buying behavior. The research stressed the customers' satisfaction role in focusing on expectation, performance achieved, and satisfaction. Comparison between expectation and performance achieved leads either to customers’ satisfaction or dissatisfaction of customer.

Trust

Trust has been defined as consumers’ willingness to rely upon their expectations about a firm's future behavior (Walshet et al., 2010). Trust is an essential issue in human relationships.
Morgan and Hunt (1994) pointed out that trust means someone regards his/her transactional partners as reliable and honest and has confidence in them. (Morgan and Hunt, 1994) referred that trust is an essential issue in human relationships, they pointed out that trust means someone regards his/her transactional partners as reliable and honest and has confidence in them.

Smith and Barclay (1997) suggested that trust is a cognitive expectation or emotional viewpoint. It is also a behavior bearing risks or willingness to be engaged in the above said behavior. If the object trusted is an organization, trust is defined as the customers’ dependence on service quality and reliability offered by that organization (Garbarino and Johnson, 1999). Trust is a very important factor in today’s business competitive environment. Trust in a business relationship helps reduce business risks (Anderson, 1998). Smeltzer (1997) pointed out that mutual trust is influenced by psychological identification, image, and reputation perceived between suppliers and buyers.

Singh and Sirdeshmukh (2000) considered the definition of trust came before and after transactions. The trust presented before the transactions directly influenced satisfaction after transactions, while the trust shown after transactions directly influenced trust afterwards.

Word of Mouth (WOM)

Word-of-mouth means the measure of consumers’ major informal communication. In early times, word-of-mouth meant at least two consumers, without commercial intention, communicating face-to-face regarding brands, products, or services. Communication is critical in customers’ consumption and the process is called word-of-mouth (Lin & Chen, 2005). Word-of-mouth (WOM) communication usually invites thoughts on others. Some people engage in WOM communication to seek other people’s opinions on products or companies. Other people first consider the characteristics of potential WOM message receivers and then deliver WOM messages to the relevant receiver (Allsop, Bassett & Hoskins, 2007).

Word of mouth is gaining importance among the societal changes observed in the environment and has become one of the most important and effective communication channel. (Harrison-Walker, 2001) defined WOM as “informal, person-to-person communication between a perceived non-commercial communicator and a receiver regarding a brand, a product, an organization or a service. The basic idea behind WOM is that information about products, services, stores, companies and so on can spread from one consumer to another. In its broadest sense, WOM communication includes any information about a target object (e.g. company, brand) transferred from one individual to another either in person or via some communication medium (Brown et al., 2005). WOM is described as the process that allows
consumers to share information and opinions that direct buyers toward and away from specific products, brands and services (Hawkins et al., 2004). There is recent focus on WOM in the literature on relationship marketing as a potential response that can emerge from efforts directed at forming relationships with consumers (e.g. Verhoef et al., 2002).

Lias et al., (2012) mentioned that word of mouth has been an age old concept where a person shares his view with another person. The views of the person can be related to a product or the service he have received. The studies in consumer behavior suggest that words of mouth have a strong influence on the psychology of the person. The influence of word of mouth can have both positive and negative aspects. Relating word of mouth to the consumer behavior, it can be interpreted that the positive word of mouth increases the likelihood of the consumers in opting for the product, whereas the negative word of mouth does the reverse. The overall effect of the word of mouth is dependent on two factors. The total number of people being exposed to positive word of mouth or negative word of mouth helps in judging the final influence.

The Relationship between Corporate Image and Customer Satisfaction
Cameran et al., (2010) mentioned that there is considerable evidence in the literature supporting the relationship between a company’s image and the level of satisfaction reported by its customers, for this reason, it is often argued that customer satisfaction should be the ultimate goal of all firms. Many previous studies explored the relationship between corporate image and customer satisfaction, e.g. (Abd-El-Salam & Shawky, 2013) explored that corporate image had positive impact on customer satisfaction. (Cameran et al., 2008) found that corporate image had strong effect impact on customer satisfaction. Cameran et al., (2010) explored that corporate image had strong relationship and significant effect on customer satisfaction.

The Relationship between Corporate Image and Trust
When the consumer owns a good image about the company, the company's image - via the time - in turn affect his trust. Previous literature mainly focused on the influences of corporate image on consumers’ trust e.g. (Grewal et al., 1998; Solomon, 1999), while few studies have discussed the influence of corporate image on consumers’ trust. Few previous studies explored the relationship between corporate image and customer trust, e.g. (Lin and Lu, 2010) found that corporate image had strong effect on trust.
The Relationship between Customer Satisfaction and WOM
Positive customer's WOM often come from his/her satisfaction about the company. Previous literature mainly focused on the influences of customer's satisfaction on consumers' WOM e.g. (NC, 2001) found that customer satisfaction effects of customer's word of mouth. Aljumaa et al., (2014) explored that customer satisfaction has strong effect on customer's word of mouth. In addition, (Jayasankaraprasad et al., 2012) found that customer's satisfaction effects on his/her word of mouth. Ranaweera et al., (2003) found that there is strong relationship between these two variables, and explored that customer's satisfaction effects positively on customer's word of mouth.

The Relationship between Trust and WOM
It is known, that the consumer who has trust on a company, he speaks a positive manner about the company and its products. Few previous studies explored the strong relationship between customer's trust and word of mouth, e.g. (Sichtmann, 2007) illustrated that trust had strong impacts on customer's word of mouth. In addition, Ranaweera et al., (2003) found that customer's trust effects on word of mouth. (Salehnia et al., 2014) explored that customer's trust effect positively on customer's word of mouth.

THE PROPOSED CONCEPTUAL FRAMEWORK
The conceptual framework below is proposed to ensure that corporate image is as independent variable impacts on dependent variable which is called customer's word of mouth when customer satisfaction and trust are mediating.

CONCLUSIVE REMARKS
The purposes of this study were to determine a conceptual framework and to create customer's word of mouth by build corporate image and to illustrate the role of mediating variable which are
namely consumer’s satisfaction and trust. If the study were applied in practice in the future by
one of the researchers, the results inform the company managers how to use the independent
variables e.g. corporate image and to see its effect on customer’s word of mouth. In addition,
the results of study will give the researchers idea about the mediating role of customer's
satisfaction and trust between corporate image and customer’s word of mouth and will try to
explore if customer’s satisfaction and trust are full or partial mediating.
